

Racing To Profit Members' Club 2018

Section 1 Strategies: Where to begin?

Intro: This summary is intended to provide you with some ideas about what systematic strategies you can follow from the stats qualifiers posted in Section 1 of the daily members' posts. It is not advised to back all horses listed in Section 1 but instead follow a handful of 'strategies' based on the horses listed in section 1.

Below are a selection of strategies that you could start following. You may wish to pick one or two and ease your way in. Results are to 1 point win bets

(I will revise these on September 1st when there are two further Jumps strategies that will come into play when the Geegeez speed ratings return for jumps)

Flat Strategies 2018

Following a portfolio of Strategy # 1, 4 and 6 could be a decent place to start...

Strategy #1

Rules:

- Horse is Double or Treble Top Rated: Two or three of **H1 I1 G1**, as entered next to the horse's name.
- Any Odds
- You can pick out these qualifiers the evening before with the information provided. On the morning of race day such qualifiers get an **S1** (strategy 1) added next to their name, indicating they are a strategy 1 qualifier. These S symbols are for your own convenience.

Results 2017: Total: 72 bets / 17 wins / +17.2

Results 2018: Up to 17th Sept : 20/78,33p, +10.15

Total: 150 bets / 37 wins / +27.35

Note: The ratings pointers (the red symbols) are a constant and reassurance that this approach should keep ticking over in the weeks and months ahead. We are focusing on those that are top rated within the ratings set and as such are the best horses in the race, as per the ratings. When combined with my trainer based qualifiers it looks to be a powerful combination. At a 25% win SR it is one of the highest win SR of all the strategies. Even so, with this win SR there will be still be losing runs of 24 or so every 1000 bets and many between 1-24. As with any strategy another alternative is to use these qualifiers as a 'starting point' and 'way in' to looking at the horse in more depth and their odds, before deciding whether to play them. This is optional but there will be some qualifiers who you may deem too short a price. I use 3/1 or bigger as my own guide for systems qualifiers, but this is personal.

Strategy #4

Rules:

- Horse is treble rated: 1 of each ratings sets (**I1/3, H1/3, G1/3**)
- Any odds
- You can pick out these qualifiers the evening before with the information provided. On the morning of race day such qualifiers will get an **S4** (strategy 4) added next to their name, indicating they are a strategy 4 qualifier.

Results 2017: 130 bets / 39 wins / 66 wins|places / +38.5 (early|bog)

Results 2018: Up to 17th Sept : 37/157,74p, +19.60

Total: 287 bets / 76 wins / 140 wins|places / +58.10

Note: *as with S1, the thinking is very similar and to date the winning SR is 26%.*

Strategy #6

Rules:

- Top Rated, 6/1 or bigger:
- **H1, I1, G1** (1 or more), 6/1 or bigger on prices entered next to horse's name on morning of racing. SP irrelevant.
- Results are based on the generally available price I enter next to the horse on the morning of racing. If they are Top rated against one of my three ratings sets that I use, and they are 6/1 or bigger, they qualify and at that point I post an **S6** next to their name. You are free to bet the evening before. I would advise keeping your own results (as I would in general) so that you can compare. You will back winners that don't officially qualify when I update the odds in the morning and vice versa. It all evens out and you may well do even better than the results below.

Results 2017: 173bets / 23 wins / +83 early/bog

Results 2018: Up to 17th Sept : 20/159,49p, +62.9 early/bog, +80 (BFSP)

Total: 332 bets / 43 wins / +164.9 (early/bog)

Note: *this is a bigger odds strategy and operates in the 10-13% win SR zone. This does mean that hefty losing runs can be expected at times, a maximum of between 50-60 every 1000 bets, and many in between that. This approach does find big priced winners. Such an approach/win sr/long losing runs is not for everyone.*

**

Flat: S1 / S4 / S6

Combined results:

2017: 375 bets / 79 wins / +138.7 points (1 point win) (to widely available morning odds/BOG)

2018 to Up to 17th Sept : 394 bets / 77 wins / 156 wins/places / +92.65 (early/bog) / +109.75 (*if backing S6 to BFSP)

Betting Bank: with a combined win SR of around 20% a betting bank of 100-150 points should be sufficient to cover the down periods and maximum losing runs at least three times, and indeed each strategy individually hitting their worst run all at the same time.

S1 + S4

S6 is more volatile with a lower win SR but has been very profitable since inception. However, if you wanted to focus on those with a higher win SR, and thus shorter losing runs, combining S1 + S4 could be the way forward. (note: these have had a tricky mid-summer period, with S6 p

2018 Results: 235 bets / 57 wins / 107 w|places / 24% win SR / +29.75 (early/bog)

*

Jumps Strategies 2018

Strategy # S1

- A jumps qualifier in section 1
- Horse has a Geegeez **G1** or **G3** symbol
- Horse qualifies if priced 10/1 or bigger on morning prices I enter. Horse also qualifies if 11.00+ BFSP (to cover any drifters/those shorter than 10/1 on morning prices)

Results 2017 : 132 bets / 17 wins / 13% sr / +91 early|bog / +118 BFSP / 69 % ROI

Results 2018 up to 16/09/18: 5/66, 19p, +21, +48.5 BFSP

Strategy # S2A

- A jumps qualifier in section 1
- Horse is priced 16/1 to 25/1 on the morning of racing, when I add the generally available price.
- Again, as with any price based strategy you are free to bet at a time of your choosing if you so wish.

2018-

- Win only (1 point win): 8/136,27p, +38, +83 (BFSP)
- Each Way (1/2 point EW): 8/136,27p, +39.475
- Each Way (1pt EW): 8/136,27p, +78.95

Note: This is a big priced strategy that developed as a subset of what was Jumps Strategy 2 (10/1-25/1). It's become clear that focusing on those priced 16/1-25/1 has reduced the number of bets and massively driven up the return on investment. There is the option to back selections EW, which would reduce the losing runs whereby you get no return. You can see the various results above. Given how Strategy 2 performed in 2017 (64/699, +271) and how it has done this year, I have every confidence that over time this new more focussed approach will continue to be profitable. It's likely this will operate in the 8-10% win SR and if betting win only will result in some hefty losing runs every 1000 bets, 65-100 would not be impossible given the maths. An EW sr of 20-25% or so would ensure less severe losing runs. Again, the option is there to use these qualifiers as a starting point and a way in for further research, where you can make your own judgement on the horse etc. It does throw up winners that make no sense on paper. Starting off backing these to £2 stakes at BFSP is an option.

Those strategies, across both Flat and Jumps, are where I would focus initially and give you plenty of systematic options for the months ahead. I update results regularly and you are free to look through the strategies results documents over that time and form your own opinions, as well as the notes on other ideas I am tracking. All such information can be found in THE KEY, within each daily members' post.

To consider

Jumps Strategy no. S3A

- Those jumps qualifiers in Section 1 that have an **ES+** next to their name, and thus become an **S3A** qualifier.
- These qualifiers stem from a more focussed look at my trainer stats, which focus on angles that have at least 10 winners in the study period (last three years), a 25% win SR and/or a 20% win SR and 50% win/place SR.
- Any odds
- This strategy is simply based on my trainer stats and does not use 'ratings pointers' (the red symbols) which help us add context as to the quality of the actual horse. As such it is arguably higher risk in terms of long term success.
- There are similar qualifiers, with the same logic, for Flat qualifiers but the evidence is building for those and is something to monitor.

Results 2017: 77 bets / 14 wins / 24 places / 18% win sr / +9.75 early|bog

Results 2018 : 33/153,48p, +35.41

Total: 230 bets / 47 wins / 72 wins|places / 20% win SR / +45.16 points (early|bog)

To further consider

(judgement to me made come end 2018)

For both FLAT and JUMPS qualifiers in section 1

Strategy no. S3A#

- Qualifier is an **ES+** qualifier BUT also has two or more ratings pointers next to their name (the red symbols) EG **ES+ H1 I3**
- This idea combines the 'best of' my trainer stats angles with the ratings sets I use, which add context to the quality of the actual horse. Logically, in time, this should prove a useful strategy, but the jury is arguably still out..

Results

Flat 2018: 15/81,36p, -2.4

Jumps since Sept 1st 2017: 30/97, 44p, +45.91

Total: 178 bets / 45 wins / 80 wins|places / +43.51 (early|bog)

In Form Horses

- Horse qualifies in section 1, and WON on it's last start, denotes by a **w1**

Results: 2018 (since 12th Feb 2018- 16th Sept)

- Flat: 25/141,47p, -17.8
- **Jumps:** 36/113,43p, +51.25
- **Total:** 254 bets / 61 wins / 90 w|places / +33.45 (early|bog)

**

To Conclude

This information is presented for you to make your own punting decisions. Whatever you decide, please start betting small and ensure you have an adequate betting bank to sustain the losing runs, which will happen. If you like a systematic approach Flat S1, S4 and S6, and Jumps S1+ S2A should provide you with a decent portfolio in which to follow the section 1 qualifiers. You may just pick one or two, ignore all of them, or just use as 'starting points'. I would strongly recommend Jumps S1 + Flat S6. The choice is yours. Patience and long-term thinking will be rewarded. I will be keeping a close eye on the 'to consider' options as above.

My hope in time is that I can help both you and I create a focussed systematic portfolio that can return us at least 100 points profit per calendar year.

If you have any questions do post a comment or email me: info@racingtoprofit.co.uk
